DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 and 11, drawn to an aircraft system, classified in class 244, subclass 57.
- II. Claims 6-8, drawn to a method for managing ventilating airflow in an aircraft rotary device, classified in class 454, subclass 71.
- III. Claims 9-10, drawn to a method for protecting a zone from exhaust effluent, classified in class 454, subclass 83.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method can be practiced by another apparatus such as an onboard ventilating airflow management system having a filter operable disposed on/at the inlet of the conduit structure.

Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP §

Art Unit: 3644

806.05(e)). In this case the method can be practiced by another materially different apparatus such as a car or a boat.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (group II) as claimed does not require the particulars of the subcombination as claimed where the subcombination claims an intermediate location of the airflow system. The subcombination has separate utility such as a car or a boat.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Bob Varitz on 6/20/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen A. Holzen whose telephone number is 571-272-6309. The examiner can normally be reached on M-F 8:30-5:00.
